

VisualPOS – A Retail Point-of-Sale Business Software Solution.

VisualPOS is a comprehensive Retail Point-of-Sale Business Software Package designed to meet the Retail Point-of-Sale Management requirements of Retailing Organizations in the Middle East.

VisualPOS has the following salient features :

visualPOS

- ❖ Fully menu-driven and user-friendly.
- ❖ Bar Code functionality to scan labels at the time of Sale
- ❖ Multi-department categorization of items.
- ❖ Day-end Process to update daily transactions to the back-office.
- ❖ Reports indicating daily sales, composition, collections, etc.
- ❖ Data Security by controlling user access via System Administration layer.

VisualPOS comprises of Two modules :

1. **VisualPOS – FRONT Office** module
2. **VisualPOS – BACK Office** module

The VisualPOS – Front Office module provides for three levels of functions, typically associated with a Retail Store front operation. These are :

- 1.a. CASHIER function
- 1.b. MANAGER function
- 1.c. ADMINISTRATOR function.

The Front Office module can operate in an off-line or on-line mode at the Retail Store front. At the start of a business day, the Price Look Up (PLU) file – which includes Bar Codes, special discounts, promotions, etc., is uploaded into the Front Office module - from the Back Office module. At the end of each Shift / Day, the Shift / Day End files are downloaded from Front Office module to the Back Office module. In off-line mode during the day, users of Front Office module can connect to the Back Office module, to do Stock Queries at other Locations. There is no limit to the number of Front Office modules that interact with one Back Office.

The Cashier function emulates all the hard key functions of a conventional Point-of-Sale machine, by providing software driven options instead. The Front Office module generates a variety of reports which give management effective control on Retail Store front operations.

The Front Office module operates on industry standard Personal Computer Systems and Point-of-Sale compatible terminals, in a single-user mode. It has VFP as the DBMS back-end and VFP as the front-end.

The Back Office module is a business application which resides on the back office Server of an organization. It integrates into **VisualENTERPRISE** - our proprietary mid-market ERP Application Software Solution. It can also be integrated into popular international third-party ERP Application Software.

At the end of each Shift / Day, once the Shift / Day End files have been downloaded, data is processed and updated to the Inventory / Operations & Financial modules of the ERP Application Software. An error file is generated which throws out discrepancy transactions, that are corrected and reprocessed.

The Back Office module operates on PC Networks (Local & Remote) in a true multi-user environment. It is available in two Series. The **Premium Series** has Microsoft SQL SERVER as the RDBMS back-end and VISUAL BASIC as the front-end. The **Lite Series** has Microsoft MSDE as the DBMS back-end and VISUAL BASIC as the front-end. The advantage this provides to Customers is that they can start off with the Lite Series - with a lower investment, and have an automatic migration path to the Premium Series at a later date - if their volumes justify additional investments. As far as the look & feel of the Application Packages are considered, they are identical.

VisualPOS – FRONT Office module

CASHIER Function

- Sales Entry
- Sales Returns
- Goods-on-Approval
- Goods-on-Approval Returns
- Transfer In's
