VisualPRODPLAN – Business Software for Production / Manufacturing Activities

VisualPRODPLAN is a Business Software Solution designed to meet the Production Planning & Control and Job Costing requirements of medium to large manufacturing organizations in the Middle East. It caters to the Production Planning & Job Costing related activities of an organization & generates useful management reports that helps manage manufacturing effectively.

Some highlights of VisualPRODPLAN include:

- ❖ Client / Server Architecture.
 - Presentation Tier: Windows desktop.
 - Application Logic Tier: Windows server, COM/DCOM, Active Server Page (ASP) with VB Script & Java Script, Microsoft Transaction Server (MTS), ADO/OLEDB, Seagate Crystal Reports, etc.
 - Data / Resources Tier: Microsoft MSDE / SQL Server - preferred.
- ❖ User customized Report/Menu headings with dynamic Menu display.
- ❖ Report export capability to Microsoft Word, Excel, email, etc.
- ❖ On-line Transaction Processing (OLTP) & on-line Analytical Processing (OLAP) functionality.
- ❖ Complete Data Security by controlling user access via System Administration layer.
- ❖ Detailed User Profile creation with access rights control capability.
- ❖ Built-in Audit Trail facility.

Whatever the nature of your manufacturing process, if monitoring of Production is a nightmare, VisualPRODPLAN will meet your requirement. VisualPRODPLAN is integrated to **VisualENTERPRISE** - our proprietary mid-market ERP Business Software Solution. Thus stocks of inventory items issued to manufacturing jobs are updated in real-time.

VisualPRODPLAN generates a wide range of Job, Production and MIS reports & queries that can be viewed, printed and exported to popular Word Processing Packages. By using third party Software Tools like Crystal Reports, you can customize your own sets of reports which can also be **emailed** to users.

VisualPRODPLAN operates on PC Networks (Local & Remote) in a true multi-user environment. It is currently available in two Series. The **Premium Series** has MS SQL SERVER as the RDBMS back-end and VISUAL BASIC as the front-end. The **Lite Series** has MSDE as the DBMS back-end and VISUAL BASIC as the front-end. The advantage this provides to Customers is that they can start off with the Lite Series - with a lower investment, and have an automatic migration path to the Premium Series at a later date - if their volumes justify additional investments. As for as the look & feel of the Application is considered, they are identical. Another advantage is that Premium Series & Lite Series Packages can coexist at the same Customer installation, even in an integrated mode, not forcing the Customer to go in for all Premium Series or all Lite Series.

VisualPRODPLAN broadly comprises of the following :

❖ **MASTERS**

- Processes
- Machines
- Job Orders
- Operators

❖ **TRANSACTIONS**

- Request for Estimation
- Job Estimation
- Production Planning
- Internal Material Requisitions
