

## VisualRMS/T – A Restaurant Management Business Software Solution.

**VisualRMS/T** is part of our established user-friendly, easy-to-operate yet integrated and comprehensive Restaurant Management Business Software Solution. It particularly caters to business requirements of Fast Food / Coffee Shop line of restaurant industry, and enables you to exercise effective controls on your operations. VisualRMS/T can simultaneously cater to any number of restaurant outlets.

We are pleased to announce that VisualRMS/T has met IBM specifications and validated as a “**Ready for IBM Retail Store Innovations - Point-of-Sale Solution**”.

VisualRMS/T has the following salient features :

- ❖ Fully menu-driven and user-friendly.
- ❖ Recipe entry to keep track of ingredients used in preparation of a food item.
- ❖ Bill of Material costing for finished products.
- ❖ Multi-department categorization of food items.
- ❖ Day-end Process to update bill of material at the back-office.
- ❖ Reports indicating periodical sales, food and beverage consumption, etc.
- ❖ Data Security by controlling user access via System Administration layer.

**visualRMS**

VisualRMS/T comprises of two modules :

1. VisualRMS – FRONT Office module (having Touch based user interface)
2. VisualRMS – BACK Office module

The VisualRMS – Front Office module consists of two levels of access functions, typically associated with a Restaurant Store front operation. These are :

- 1.a. CASHIERING function
- 1.b. MANAGER function

The VisualRMS Front Office module operates in an off-line single-user mode at the Store front of the Restaurant outlet. At start of a business day, the Price Look Up (PLU) file is uploaded into the Front Office module - from the VisualRMS ADMINISTRATOR - Back Office module. At the end of each Day, the Day End files are downloaded from Front Office module to the Back Office module. During the day, users of Front Office module may dial up and connect to the Back Office module, to do Stock Queries, etc. There is no limit to the number of Front Office modules that can connect into one Back Office module.

The Front Office module emulates all the hard key functions of a typical Point-of-Sale machine, by providing software driven options instead. It generates Hourly Coverage Report and Day End Reports, which gives store front management effective control on their operations.

The Cashier function maintains information pertaining to Menu Items, Cash & Credit / Credit Card Sales, Sales Returns, Settlement Details, etc.

The Manager function performs master file maintenance, user maintenance and general housekeeping – Recipe Master maintenance, Sales Promotion, Master File Transfers, Error File Correction & Back Office Updation. It maintains information pertaining to System Parameters, User Profiles & IDs, Currencies, Credit Cards, etc. It also

provides options to maintain your Information intact including Uploading Price Look-up (PLU) Tables, Downloading Transactions, Back-up/Restore Data Files, etc.

The Front Office module operates on industry standard Personal Computer Systems and Point-of-Sale compatible terminals, in a single-user mode. It is currently available only in **Lite Series**. It has VISUAL FOXPRO as the DBMS back-end and VISUAL FOXPRO as the front-end.

The VisualRMS Back Office module is a business application which resides on the back office Server of an organization. It integrates into **VisualENTERPRISE** - our proprietary mid-market ERP Application Software Solution.

At the end of each Shift / Day, once the Shift / Day End files have been downloaded, data is processed and updated to the Inventory / Operations & Financial modules of the ERP Application Software. An error file is generated which throws out discrepancy transactions, that are corrected and reprocessed.

The Back Office module operates on PC Networks (Local & Remote) in a true multi-user environment. It is available in two Series. The **Premium Series** has Microsoft SQL SERVER as the RDBMS back-end and VISUAL BASIC as the front-end. The **Lite Series** has Microsoft MSDE as the DBMS back-end and VISUAL BASIC as the front-end. The advantage this provides to Customers is that they can start off with the Lite Series - with a lower investment, and have an automatic migration path to the Premium Series at a later date - if their volumes justify additional investments. As far as the look & feel of the Application Packages are considered, they are identical.

VisualRMS/T comprises of the following :

**1. VisualRMS – FRONT Office module (having Touch based user interface)**

**1.a. CASHIERING Options**

- Sales Order Entry Screen
- Sales Return Entry Screen
- Reprinting Of bill
