TOUR OPERATIONS MANAGEMENT Module
--

Day by day, businesses face increasing challenges in the new economy. This will get more intense in the future. Tour businesses must position themselves as providers of comprehensive services, and adapt to customer demands for higher quality, lower prices, faster service, and reliable delivery.

Customers have never been more in control. They have come to expect superb quality, selection, and service. And they're perfectly willing to abandon any vendor that can't deliver. In today's market, there's no margin for error.

There has never been a more challenging time for the Tour business community. Customers & Associates expect better services, greater variety, and faster, more personalized service. Partners and suppliers want the best deal, or they'll look for other partners. New markets can materialize in an instant -- forcing you to change directions and commit resources -- then vanish.

That's why smart Tour operators are shifting their strategic focus from product to customer -- and completely re-engineering the way they meet customer needs. Every piece of your value chain, from forecasting and planning to allocation and replenishment, must be focused on meeting and surpassing customer expectations.

In such a volatile business climate, staying focused on customer needs is a huge challenge. That's why more and more companies are turning to **e-TOURS.Net**. This powerful Software Solution enables you to integrate every step of your value chain seamlessly, from suppliers to customers. So you can meet customers' needs quickly and efficiently without raising costs or slowing growth.

If you need a comprehensive Business Software Solution designed specifically for the new Tourism business environment, **e-TOURS.Net** is that solution. From optimizing strategic partnerships to leveraging customer data to exploiting multiple sales channels. It lets you focus completely on your customers -- while cutting costs and maintaining growth.

e-TOURS.Net turns customer demands into opportunities for growth and profit.

e-TOURS.Net is a comprehensive eBusiness Software Solution designed to meet the functional and operational requirements of Tour Operating businesses.

It is a complete Tours Booking Solution with B2B / B2C (under construction) capabilities. It is a sophisticated Internet-based Reservation System for Hotel / Apartment bookings, Transfers, Tours, Visas, other services, etc that serves any size of Tour Operator in single or multiple locations.

e-TOURS.Net has been developed as a web-based Application Software and runs off a Microsoft Windows based hosted web server. The front end user interface has been developed in Microsoft .NET Framework , with the back end RDBMS being Microsoft SQL Server, running off a Microsoft Windows Server, using popular browsers IE 5 and higher. All reports have been developed in HTML & Crystal Reports.

Using Web Services and XML capabilities, **e-TOURS.Net** can be integrated with third party applications – including portals, etc.

e-TOURS.Net has an English interface, with capabilities to be multi-lingual in future.

It delivers speed, efficiency and flexibility to every aspect of your enterprise. It focuses your entire value chain -- from the way you manage customers and fulfilment to how you maintain inventory and analyze performance -- on your customers. Generating measurable benefits in cost, revenue, and strategy.

By seamlessly integrating demand, allocation, and replenishment functions, you ensure a more responsive, flexible supply chain, enhancing efficiencies and minimizing expenses.

Multi-channel relationships and transaction management, coupled with intelligent marketing and customer service, helps you boost sales, increase visit frequency, raise customer retention, and more effectively attract new customers.

Sophisticated reporting and analysis capabilities -- plus integrated Operations, Financial, and other data -- give you deeper insights into your customers and your operations, allowing you to adapt faster to market changes.

It offers all the functionality you need to put customers at the centre of your value chain -- without losing control of costs or sacrificing growth.

It provides a comprehensive data management function that increases efficiency and ease of management, with access to critical customer information It gives you the power to directly address customer needs on a personal level. It lets you back up your promises to customers with on-time, complete, and accurate deliveries of services.

Tours Operations Management module enables you to integrate your supply chain, helping you respond faster and more cost effectively to shifts in consumer demands and behaviours. By helping you redefine every step of your value chain, from how you manage suppliers and partners to the ways you strengthen customer relationships and build customer loyalty, Tours Operations Management module generates measurable benefits in terms of costs, revenues, and strategy.

Powerful reporting and analytical tools for sales and marketing give you access to aggregated data from all sources, internal and external, supporting better decision making and making operations more cost-effective.

Integrated supply chain management helps rationalize your entire process, from suppliers to consumers, increasing flexibility and cutting time to market while keeping costs to a minimum.

Sophisticated customer profiling lets you quickly and accurately identify opportunities to increase sales, target special markets, build customer loyalty, and profitably manage customer relationships throughout the entire service lifecycle.

Our end-to-end support for all key business processes gives you a fully integrated supply chain and a full range of logical and analytical capabilities, including increased fulfilment accuracy, instant market analysis and strategising, and fast reconfiguration of pricing and distribution channels.

It offers all the information you need to create a leaner, more efficient enterprise that can deliver the products and services that consumers demand, and can adapt quickly to changing markets without losing control of costs.

Tours Operations Management module delivers reports and functionality that enable you manage your processes for vendor relationship, sales cycle - from prices quotes to invoicing and payment, etc, including:

FINANCIALS Module

Today, financial professionals face unprecedented pressures. And companies are under increasing financial scrutiny. Tracking every financial transaction within your company is no longer a matter of choice. It's a matter of survival.

Financials Module is designed to deliver the kind of accurate, up-to-the-minute, company-wide data you require.

As a leading Business Software Solution for providing operational, analytical, and collaborative applications for financial management, our **e-ENTERPRISE.Net - Financial Module** can help you maintain financial control and accountability -- and empower your organization to achieve sustainable growth and profitability.

This Module will enable you :

- Improve financial planning
- Reduce the cost of finance
- Streamline the financial supply chain
- Optimize the planning and performance management cycle
- Have access to the information you need, when you need it, increasing the efficiency of your finance department.

It will also ensure the following :

- Increase liquidity
- Reduce operating costs
- Improve relationships with investors and stakeholders
- Improve understanding and management of intangible assets and intellectual capital
- Increase transparency of business performance and strategic success factors
- Accelerate response to the market changes that drive profitability and value creation
- Empower managers and knowledge workers through state-of-the-art services and workplaces
- Streamline financial processes, including collection, financing, payment, and settlement
- Enhance access to accurate, real-time financial and performance information -- even across enterprise boundaries and third-party systems
- Provide financial professionals, executives, and managers with a complete picture of their business, and allows them to turn administrative financial tasks into value-added initiatives for customers and shareholders.

Financials Module delivers reports and functionality that enable you manage all your financial processes, including:

- Chart of accounts -- allows you to define all your company's accounts and their hierarchical relationships.
- Journal entries -- allows you to enter or find your manual journal entries. Each transaction can be automatically allocated to a project or a profit center.
- Transaction templates -- save time and prevent mistakes when entering manual journal entries.
- Recurrent journal transactions -- let you create your own set of recurrent transactions, including automatic frequency reminders.
- Credit notes -- credit your clients if they return goods or for any other reason.
- Debit notes -- debit your vendors if you return goods or for any other reason.
- Exchange rate differences -- adjust your foreign currency accounts to the changes in your local currency.
- Trial balance report -- displays your accounts' balances and transactions. You can view all your financial reports in base and foreign currency, and in each detailing level.
- Profit and Loss report -- displays your incomes and expenses in the conventional way used by accountants.
- Balance Sheet report -- displays your assets and liabilities in the conventional way used by accountants.
- Comparative reports -- allow your reports to be displayed in a comparative view between months, quarters, years, or any other period.

- Budgets -- helps you define and track your budget in base currency and view a summarizing budget report, which compares the actual versus the planned figures.
- Cash & Bank transactions -- provide the functionality you need to handle all your financial processing, including: Receipt records & Payment records.
- PDC checks -- automatically displays the deferred checks that should be deposited that day. Checks for payment issues checks for your vendors, employees, or other creditors. Reconciliation -- gives you fully automatic bank reconciliation. You can reconcile debit versus credit transactions or reconcile your data with your bank's records.
- Opening balances -- manages your customers' and vendors' opening balances.

SYSTEM SECURITY ADMINISTRATION & AUDIT TRAIL Module

In any enterprise-wide Business Software Solution installation, security control & administration is of paramount importance. **e-ENTERPRISE.Net** – **SYSTEM ADMINISTRATION Module** meets the Security Administration and Audit trail requirements of such Organisations operating in a 7 / 24 uptime environment. It is a sophisticated Module which performs core functionality and generates a variety of reports designed to give management effective control in this area.

SYSTEM ADMINISTRATION Module covers the following major operational areas :

- Company Parameterisation both for Financials & Operation
- Managing Module Captions
- Users Definition & Changing Password
- Role & Access Rights
- Work Flow Authorisation

Whatever your business, SYSTEM ADMINISTRATION Module is key to maintain a foolproof environment. The Data-Base maintains valuable information of Company Profiles, Users, Access Rights, etc. It controls access to individual options in each Module, be it Insert, Amend, Delete, View or Print. It has upto 9 levels of authorisation, 9 being the highest level and is only awarded to the System Supervisor. The System Supervisor then has the authority to define individual users along with their access rights.

The Audit Trail feature of SYSTEM ADMINISTRATION Module provides activity reports for each user right from the time he logs into the system to the time he logs out of the system. In between, it tracks the modules the user has accessed along with the various options. Any unauthorised access is also logged.

SYSTEM ADMINISTRATION Module includes powerful functions that handle the administrative aspects of your company, including:

- System setup -- gives you an easy, step-by-step list that shows you how to set up all company data and preferences in a few quick steps.
- Definition -- allows you to define and identify your users, access rights, ageing slabs, base currency, financial period, and much more.
- Permissions -- keeps your business information secure with comprehensive user validation that makes sure only the right people have access to your data.
- Rates tables -- allow you to define your base currency which is reflected in reports and data entry.
- Utilities -- enable you to back up your data, make corrections, and run automatic, predefined processes.
